

37th Annual Ram Sale
12pm of farm, Tatu, Ohura, Thursday, 20th Nov, 2025

#### SALE LOCATION

# PAPARATA ELITE ROMNEY Thirty Seventh Annual Sale of Hill Country Rams 136 SELECTED TWO-TOOTH ROMNEY RAMS

On Account of Paparata Farms

To be held on the Tatu property on Thursday, 20<sup>th</sup> November, at 12 noon.

Welcome to the 37<sup>th</sup> Paparata ram sale.

I started last year by describing the 2024 season as 'very difficult', and it was.

The 2025 season at Paparata has been a struggle as regards climate. A dry autumn resulted in a lower scanning and hungry cows. It is all going to be worthwhile if the strong market for red meat prevails. The future looks exciting.

We continue to work on lifting the productivity of our sheep.

Warm summers mean shorter springs. Lamb growth rates are important to us when making selection decisions. We have been testing testing and selecting for FE tolerance for 26 years. I am confident we have won this battle. With drench resistance becoming more common we are testing to identify those sheep with higher immunity to worms. CARLA is the test we are using.

This year we have started eye muscle scanning our ram hoggets. When the consumer buys a rack of lamb they want meat not fat.

The reproduction trait for our flock is where we want it. Scanning much above 180% provides too many triplets. We have catalogued the top 136 rams. We have others available for paddock sale.

Sit back and enjoy the rest of the season.

Trevor

## BREED TRAITS TARGETED REPRODUCTION

Paparata has been lambing hoggets since 2000. The experience has been very positive and it is a trait we will continue to prioritise. The onset of oestrus is a good indicator of lifetime fertility. Any hoggets retained that have scanned dry join a flock that is mated to a terminal sire. Hogget lambing has contributed to the increase in Paparata flock pregnancy rates.

#### Advantages are:

- Hoggets are good mothers and this continues as a 2 tooth
- Hoggets do not lamb until October so do not compete for early spring feed
- Growing the hoggets into 2 tooth's has not been a problem. Scanned inlamb hoggets scan higher as a 2 tooth than those that have not scanned inlamb as a hogget
- Even with vaccination there is some aborted lamb losses to ewes lambing for the first time. Hogget lambing eliminated these losses from 2 tooths
- We draft lambs off their hogget mothers at the end of January

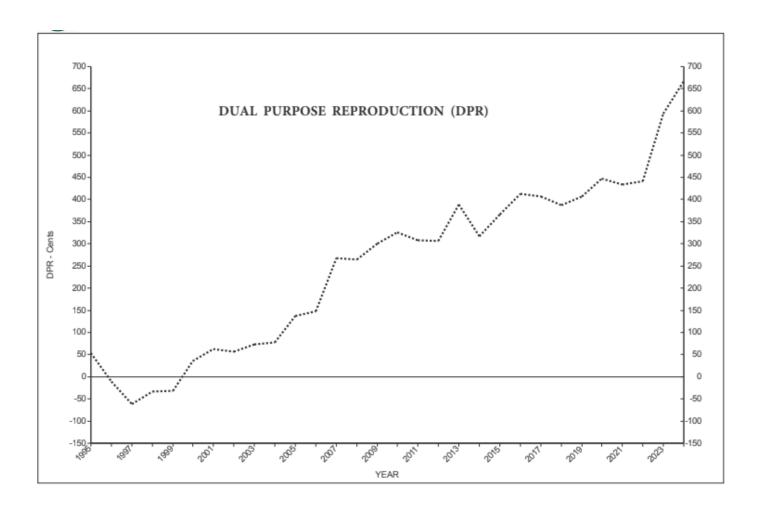

The graph on page 5 shows the genetic progress that Paparata has made for reproduction (DPR)

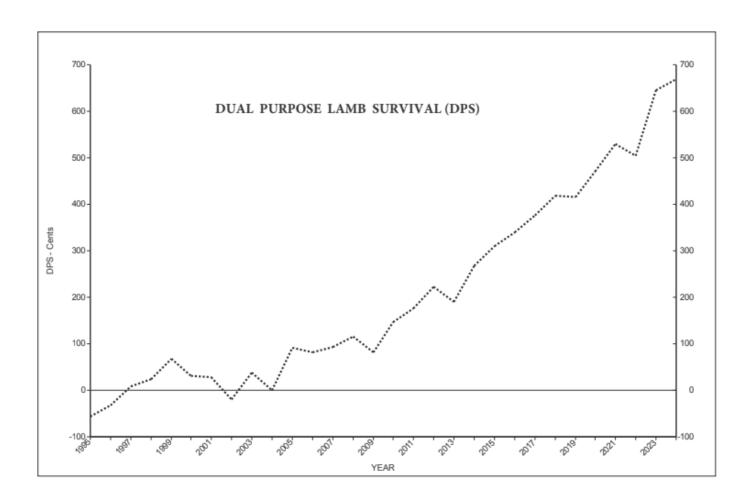

#### **SURVIVABILITY**

Paparata ewes like most other ewes in the country lamb on hills. Survivability has become an important trait.

Paparata has been using DNA technology to identify parents of recorded lambs since 2000. This has eliminated the need for a daily lambing beat to match lambs with their mothers. This has also meant the Paparata flock is lambed under commercial conditions with no shepherding. All wet dries in the Paparata recorded flock an commercial flock are culled to a flock where a terminal sire is used.

The graph on page 6 shows the genetic progress that Paparata has made for survival (DPS)

#### **FACIAL ECZEMA TOLERANCE**

'The liver damage associated with FE results in production losses that are much greater than may first appear. Even when no symptoms are visible, FE can reduce lifetime productivity by up to 25 per cent'. 'Breeding for increased tolerance to FE should be your first line of defence'.

From the Beef and Lamb resource book 'Facing up to Facial Eczema'.

#### Paparata has been building FE tolerance since 1999:

- All bought in sires need to have been tested at a high level
- Bought in sires are sourced from flocks with a long history of testing
- all home bred sires are tested and only used if they show a nil rise
- we have seen no cases of FE on Paparata for a number of years

Testing provides all sheep in the recorded flock with a FE production index. Sale ram FE indexes are provided in the catalogue. The higher the index the greater the FE tolerance level.

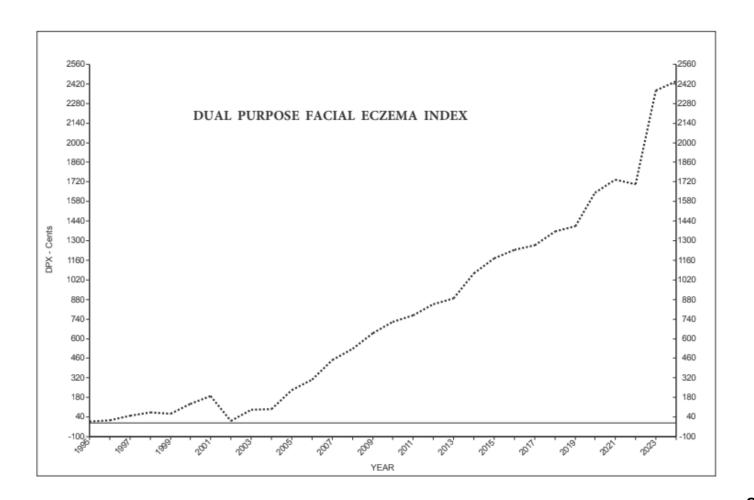

The graph on page 8 shows the genetic progress that Paparata has made for facial eczema (DPX)

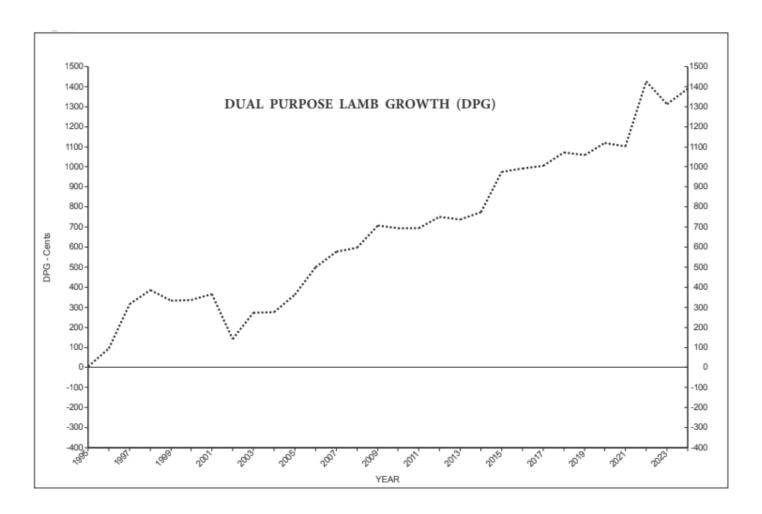

#### LAMB GROWTH AND MEAT PRODUCTION

All meat processing companies are now signalling they want heavier lambs for slaughter. At Paparata now all lambs supplied for slaughter are over 40 kg live weight. This provides a carcass in excess of 16kg. Producing an August born 40 kg live weight lamb before Xmas is not easy. Live weight growth rate is a trait Paparata has prioritised.

This year Paparata have undertaken ultrasound eye muscle scanning to gather better meat yield data. All sale rams have been scanned in late August, in conjunction with their live weight at 12 months of age measurement.

The graph on page 9 shows the genetic progress that Paparata has made for lamb growth (DPG)

#### **CARLA SALIVA TEST**

Worm faecal egg counting (FEC) is now not the only option to measure the immunity of sheep to gastrointestinal worms. Sheep digestion systems mount an antibody response to worm infections. It has been discovered that most of the antibody response was directed at just one worm molecule which has been named CARLA. Levels of anti-CARLA intestinal antibodies strongly correlated with rapid immune rejection of infecting larvae. Studies have shown that CARLA antibody responses in saliva are significantly correlated with reduced worm burdens in sheep. The result of this research means that farmers are able to measure the immunity levels of individual sheep to worm infection by measuring the levels of CARLA in the saliva.

FEC testing means measuring immunity by not drenching and letting sheep 'fill up' with worms. Those with higher immunity to worm infestation are identified. The down side is the damage to those sheep with lower immunity. At Paparata we have decided not to use FEC. We are using the saliva test to identify those sheep that have higher levels of immunity to worms.

#### **WOOL PRODUCTION**

Although there seems to have been some stirring in the market for wool lately, wool continues to disappoint. Paparata has taken up a contract to supply Bremworth Carpets. This contract rewards colour and length which is hard to achieve in our district. By managing our shearing around the seasons we have been able to improve colour and price.

The target wool fibre diameter is 33-36 microns.

#### **NEXTGEN AGRI**

We have been breeding Romney rams for over 45 years. The three graphs included in this sale catalogue demonstrate the progress made in sheep performance over this time. We are sure we can continue to increase sheep performance but there are many options. To help us make the best decisions going forward we have asked neXtgen Agri to help us.

Dr Emma Pettigrew is the neXtgen Agri representative helping us. When I asked Emma to describe what neXtgen Agri was doing for us she supplied the following.

neXtgen Agri is a consulting company specialising in genetics and breeding, helping stud breeders and commercial farmers to optimise their sheep and beef breeding operations. Our motto, "farming in our hearts, science in our heads" incorporates our drive to breed the best animals for your farming situation. We are passionate people, working with passionate farmers to achieve their goals. Working with seedstock producers to breed animals with the best potential for genetic progress, and working with producers to maximise production while reducing costs through genetic selection. Recently, we have produced a ram buying guide for maternal and terminal farmers in New Zealand, to help them make the most informed ram buying decisions they can.

We have been working with Paparata since April 2025, overseeing and advising on the breeding program, helping to allocate their mating groups to maximise genetic gain while minimising inbreeding, assisting in the sales process including cataloguing the rams, assisting interpreting data for ram selection and culling, and for ewe selection. Implementing eye muscle scanning and CARLA saliva testing in the stud operation has given more performance information for Paparata selecting their own sires and for their clients purchasing rams this year.

#### **DNA TECHNOLOGIES**

In the past information to measure production traits has come from progeny testing. The problem with progeny testing is there is a wait until lambs are born and then performance measured. In the last few years scientific research into genetics has started to provide an increasing number of tools to compliment progeny testing. Genes are made from a molecule called DNA which is copied an inherited across generations. The information in DNA is the instructions for constructing and operating a living organism. An increased knowledge of the relationship between parent and offspring DNA is seeing the development of genetic tests to identify progeny with higher production potential. With these tests there is no waiting for progeny to be tested.

DNA profiles are now held of all the Paparata recorded flock. The flock is now able to be tested for the presence of high performance genes. 'Sheep 15k' and 'Sheep 50k' are two genomic tests that Paparata is using to accelerate the generation turnover and increase productivity.

Genomic tests - Sheep 5k and Sheep 50K

Sheep 15k uses 15,000 DNA markers to generate a molecular breeding value (mBV). This mBV can be used independently or blended with an estimated breeding value (eBV) to produce a genomic breeding value (gBV). gBVs are more accurate than eBVs or mBVs.

$$eBV + mBV = gBV$$

Sheep 50k uses 50,000 DNA markers to generate mBVs. It is a more expensive and complete genetic test that ensures the value of genomics in the flock is retained and the accuracy of the 15,000 test is enhanced.

This year Paparata will be 15k testing all ram hoggets to gain an early indication of FE tolerance. Those showing higher levels of tolerance will then be dosed with Sporidesmin. The dose rate will be higher than would be possible if 15k had not been used, and gBVs gained will be more accurate than eBVs.

#### **SIL DATA PRESENTED**

Breeding values (BVs) and indexes indicate the value of a ram (or ewe) as a parent. An eBV is the estimate of the breeding value of an animal as a parent for a particular trait or characteristic. This means the BV represents the worth the animal can actually pass on to its progeny. BVs are displayed in the units they are measured in, e.g. kg for weight. Indexes combine multiple BVs for a goal trait, and their economic values to predict the merit is a dollar value for that trait. Data presented are for flock 1881 - NZGEV7 run 42793.

#### **Explanation of indexes:**

**NZMW (maternal worth) =** (-158\*EWTgBV) + (DPCR) + (153\*WWTgBV + 145\*WWTMgBV + 480\*CWgBV) + (16049\*SURgBV + 15008\*SURMgBV)

**DPX (Facial eczema) =** -2228\*GGT21gBV

**DPC (CARLA) =** 2.27\*CARLAgBV

**DPBC (Body condition) =** 3292\*BCSgBV

#### **Explanation of BVs:**

**NLBgBV -** Number of lambs born

**SURgBV** - Survival direct

**WWTgBV** - Weaning weight

LW8gBV - Live weight at 8 months of age

**EMAgBV -** Eye muscle area

**EWTgBV** - Ewe weight

**WWTMgBV** - Maternal weaning weight (milking ability)

**CWgBV** - Carcass weight

**SURMgBV -** Maternal survival (mothering ability)

GGT21gBV - Facial eczema at 21 days

**CARLAGBV - CARLA** 

**BCSgBV** - Body Condition Score

### Actual data explanation and dates recorded:

**BR -** Birth rank (S=Single, T=Twin, TR=Triplet)

**Dam Perf** - Dam performance (number of lambs/years)

WWT - Weaning weight - 9/01/2025

**LW12 -** Live weight at 12 months - 28/08/2025

**EMA -** Eye muscle area - 29/08/2025

**EM/LW** - Eye muscle area to live weight proportion (%)

Sires with a prefix of 33 are from Waimai Romney and 102 are from St Leger Romney.

#### **CONDITIONS OF SALE**

The sale will be conducted under the usual conditions governing auction sales held under the auspices of the King Country Stock and Station Agents' Association.

Every lot will be the purchaser's responsibility as from the fall of the hammer. The description of the stock in this catalogue shall be deemed to be correct. No error, omission or misdescription shall in any way invalidate the sale, nor be made the subject of any claims for compensation from either the vendor or the auctioneers. The vendor guarantees the rams jaws and will refund the purchase price on return of the defective ram (before he is used).

#### **GST EXCLUSIVE**

#### **DELIVERIES**

Lots may be left on the farm at the purchaser's risk until suitable transport is arranged.

#### **INSURANCE**

All purchases can be insured for transit or longer periods through the Auctioneer.

#### **COMMISSIONS**

5% Commission will be paid to non-participating companies, provided the purchases are introduced in writing, prior to sale day and settlement is made by that company on behalf of the purchaser.

This catalogue has been produced by neXtgen Agri and the Stud Stock Division of PGG Wrightson, and although every care has been taken to ensure accuracy, no responsibility is accepted for any error or omission that might be contained herein.

#### **PGG Wrightson and NZ Farmers Livestock**

#### **BRUCELLOSIS**

The Paparata flock is accredited Brucellosis free. All rams have been palpated and passed by a veterinarian

#### **SALE LOCATION**

Tatu - Highway 43 - 16km on the Stratford side of Ohura. Sale route signposted from Taumarunui. See map on the inside of the cover.

#### **OSH**

Please take note of the following potential hazards you may encounter when visiting our farm:

- stock movement
- · moving vehicles and machinery, including inside the woolshed
- stockyards and slippery surfaces
- pavilion seating

#### **NEED MORE INFORMATION**

Please call us if you need any more information Seymour Spence 027 8810 685 Trevor Johnson 027 2209 567 Emma Pettigrew 022 5817 695 email: paparatafarms@gmail.com
